As part of ESCAP's efforts to enhance industrial development, it implemented a project on the "promotion of intraregional trade .. in the automotive sector" in collaboration with the Korea Automobile Manufacturer's Association and funded by the Korean government. A regional consultative meeting was held in Seoul, 10-12 December 2001. This publication is a compilation of documents presented at the meeting, including a comprehensive study and survey result on the regional automotive industry.

Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense

performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine

components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

Advances in materials science and engineering have paved the way for the development of new and more capable sensors. Drawing upon case studies from manufacturing and structural monitoring and involving chemical and long wavelength infrared sensors, this book suggests an approach that frames the relevant technical issues in such a way as to expedite the consideration of new and novel sensor materials. It enables a multidisciplinary approach for identifying opportunities and making realistic assessments of technical risk and could be used to guide relevant research and development in sensor technologies.

The impact of the economic downturn and the increase in financial scandals emerging from major corporations has generated a growing interest in governance issues and has emphasized the need for companies to be transparent in their dealings with shareholders and the markets. Although the issues in Asia are fundamentally similar to those in the rest of the world, there are some crucial differences in the way in which Asian corporations acknowledge and confront these issues and in the political and legal frameworks under which they operate. Using examples of good and bad governance, Roche analyzes if the Asian approach to governance issues is unique. Business and finance students, as well as executives with an interest in Asian business or corporate governance will find this an authoritative and insightful guide to this
