These methods are described in a cookbook fashion. They are supported by a thorough discussion of the experiences with the application of these processes to actual components, the weak links found, the corrective actions taken, and the significant improvements in service life achieved. The great effect that properties of nonmetallic materials have on component life are included. The major objective of this book was to identify issues related to the introduction of new materials and the effects that advanced materials will have on the durability and technical risk of future civil aircraft throughout their service life. The committee investigated the new materials and structural concepts that are likely to be incorporated into next generation commercial aircraft and the factors influencing application decisions. Based on these predictions, the committee attempted to identify the design, characterization, monitoring, and maintenance issues that are critical for the introduction of advanced materials and structural concepts into future aircraft.
