The resulting probability space is denoted  $(\Omega, \mathcal{F}, P)$ . Every field of events must contain the null event  $\emptyset$  and the sure event  $\Omega$ . Also, for mathematical completeness, it must

Convergence of Probability Measures by Patrick Billingsley. Theorem 9. If  $S$  is separable and complete, then each probability measure on  $S$  is tight. Proof. Fix any  $\epsilon > 0$ . Since  $S$  is separable, for each  $k \in \mathbb{N}$ , by taking open  $U_k$  centered at the countable dense subset, we get a sequence of open sets  $U_k, U_{k+1}, U_{k+2}, \dots$  that cover  $S$ .
