[and] creative suggestions for activities, equipment, and resources.

Provides checklists for teachers to assess children with sensory processing problems, along with actions and activities to integrate them into the classroom and stimulate learning.

Tyler has autism and sensory processing disorder, and though sometimes he has trouble staying still, ignoring noises, and concentrating, he is learning how to cope with his disorder in different ways.

The groundbreaking book that explains Sensory Processing Disorder (SPD)--and presents a drug-free approach that offers hope for parents--now revised and updated. Does your child exhibit... Over-responsivity--or under-responsivity--to touch or movement? A child with SPD may be a "sensory avoider," withdrawing from touch, refusing to wear certain clothing, avoiding active games--or he may be a "sensory disregarder," needing a jump start to get moving. Over-responsivity--or under-responsivity--to sounds, sights taste, or smell? She may cover her ears or eyes, be a picky eater, or seem oblivious to sensory cues. Cravings for sensation? The "sensory craver" never gets enough of certain sensations, e.g., messy play, spicy food, noisy action, and perpetual movement. Poor sensory discrimination? She may not sense the difference between objects or experiences--unaware of what she's holding unless she looks, and unable to sense when she's falling or how to catch herself. Unusually high or low activity level? The child may be constantly on the go--wearing out everyone around him--or move slowly and tire easily, showing little interest in the world. Problems with posture or motor coordination? He may slouch, move awkwardly, seem careless or accident-prone. These are often the first clues to Sensory Processing Disorder--a common but frequently misdiagnosed problem in which the central nervous system misinterprets messages from the senses. The Out-of-Sync Child offers comprehensive, clear information for parents and professionals--and a drug-free treatment approach for children. This revised edition includes new sections on vision and hearing, picky eaters, and coexisting disorders such as autism and Asperger's syndrome, among other topics.

This important book by Dr Lucy Jane Miller provides cost effective, functional, on the spot tips with easily understood explanations for those dealing with SPDs at school and home settings. Anyone can use this book and help their kids with SPD and SPD related issues.

First published in 2002. Routledge is an imprint of Taylor & Francis, an informa company.

People with severe autism experience the sensory information they receive from the world completely differently to those not on the spectrum. They feel cut off and overwhelmed, and their behaviour can become very distressed. This handbook shows how we can engage with people who are non-verbal or semi-verbal and sometimes even those who have speech but lose the power to process it when they are in crisis. We can help them to make sense of the world. Intensive Interaction uses a person's own body language to make contact with them and Sensory Integration develops the capacity of an individual to receive, process and apply meaning to information provided by the senses through targeted physical activities. These techniques can be used to develop an environment tailored to the particular sensory needs of the person with severe autism, reducing factors that cause distress. With illustrations, case examples and a wide range of tried-and-tested techniques, this practical guide provides indispensable tools for parents, carers and other professionals supporting people with severe autism and other learning disabilities.

This book, Headphones: A Book for Children with Autism & Sensory Disorders, introduces the concept of wearing headphones. It was written to help children with autism & sensory disorders feel comfortable and confident in their new headphones, and to help their friends, siblings, and classmates relate to their sensory differences. The book begins in a social story type format, to help children remember what to do when their environment gets too loud. Throughout the book, a cute rhyme is repeated and can be easily memorized. This will allow children to remember to use their headphones in loud environments, rather than resorting to unwanted behaviors. The author shows several types of headphones, and encourages children to help select their own headphones, and choose headphones that they will like. The author explains how loud environments may feel to a person with autism or sensory disorders. Finally, the author points out several appropriate locations where headphones can be worn, and reminds the reader that they can wear headphones anywhere. The author/illustrator also showcases several different types of headphones, big and small, as well as several different colors. The children illustrated in the book all look different, in the hopes that each child can find a character they can relate to. The book was written and illustrated with inclusion in mind. The author hopes that this book will be utilized in preschool and elementary school classrooms, as well as libraries, and in homes. It is the perfect book to purchase for a child who is just beginning to wear headphones, and was written for the author's preschool-age son with autism. "Sometimes it's too loud, but I know what to do! I put my headphones on my ears, and noise does not get through."

Dr. Kaplan identifies common ASD symptoms such as hand-flapping, poor eye contact and tantrums as typical responses to the confusion caused by vision disorder. He also explains the effects of difficulties that people with autism experience with "ambient vision," including a lack of spatial awareness and trouble with coordination.
