"The stone crosses that somberly deck the Irish (and, to a lesser extent, the Scottish and English) landscape make more than a simple Christian statement. They represent...the quintessential symbol of the union of pagan sensibility and Christian transcendence....Tracing the tradition of the Celtic cross back to the grand megaliths of prehistoric times, Pennick skillfully explores other influences, too, which range from the expected, such as Celtic knotwork designs, to the surprising, such as Egyptian geometry. An exemplarily scholarly book, Pennick's profusely illustrated effort is well organized, full of detail, and written with clear passion for its subject."-- "Booklist . 160 pages, 58 b/w illus., 7 1/2 x 9 3/4.

For the Vampire community, the Solstice Choosing has been the holiest night of the year - for a hundred thousand years. But this year, something new is about to happen. The oldest prophecies are about to be fulfilled - and the Festival of Blessings is finally upon us.

BY THE WINNER OF THE 2020 NOBEL PRIZE IN CHEMISTRY Finalist for the Los Angeles Times Book Prize "The future is in our hands as never before, and this book explains the stakes like no other." — George Lucas "Required reading for every concerned citizen." — New York Review of Books Not since the atomic bomb has a technology so alarmed its inventors that they warned the world about its use. That is, until 2015, when biologist Jennifer Doudna called for a worldwide moratorium on the use of the gene-editing tool CRISPR—a revolutionary new technology that she helped create—to make heritable changes in human embryos. The cheapest, simplest, most effective way of manipulating DNA ever known, CRISPR may well give us the cure to HIV, genetic diseases, and some cancers. Yet even the tiniest changes to DNA could have myriad, unforeseeable consequences, to say nothing of the ethical and societal repercussions of intentionally mutating embryos to create "better" humans. Writing with fellow researcher Sam Sternberg, Doudna—who has since won the Nobel Prize for her CRISPR research—shares the thrilling story of her discovery and describes the enormous responsibility that comes with the power to rewrite the code of life. "An invaluable account . . . We owe Doudna several times over." — Guardian

Raymond Carver's complete uncollected fiction and nonfiction, including the five posthumously discovered "last" stories, found a decade after Carver's death and published here in book form for the first time. Call If You Need Me includes all of the prose previously collected in No Heroics, Please, four essays from Fires, and those five marvelous stories that range over the period of Carver's mature writing and give his devoted readers a final glimpse of the great writer at work. The pure pleasure of Carver's writing is everywhere in his work, here no less than in those stories that have already entered the canon of modern literature.

Genome editing is a powerful new tool for making precise alterations to an organism's genetic material. Recent scientific advances have made genome editing more efficient, precise, and flexible than ever before. These advances have spurred an explosion of interest from around the globe in the possible ways in which genome editing can improve human health. The speed at which these technologies are being developed and applied has led many policymakers and stakeholders to express concern about whether appropriate systems are in place to govern these technologies and how and when the public should be engaged in these decisions. Human Genome Editing considers important questions about the human application of genome editing including: balancing potential benefits with unintended risks, governing the use of genome editing, incorporating societal values into clinical applications and policy decisions, and respecting the inevitable differences across nations and cultures that will shape how and whether to use these new technologies. This report proposes criteria for heritable germline editing, provides conclusions on the crucial need for public education and engagement, and presents 7 general principles for the governance of human genome editing.
