Central auditory processing disorder (CAPD) is a condition in which there is a disconnect between what is heard and what is understood. There is not an actual hearing problem, but rather a problem with processing what is heard. CAPD affects up to 5 percent of school-aged children. CAPD is more pronounced in a noisy setting or when a child is listening to complex information.

Central auditory dysfunction : University of Cincinnati Medical Center Division of Audiology and Speech Pathology symposium. Keith, Robert W., 1937-; University of Cincinnati. Division of Audiology and Speech Pathology.

Central auditory dysfunction : University of Cincinnati ...  
Mission Statement. Our quest for knowledge concerning the central auditory system is driven by three main activities. One is clinical service. It is our strong belief that patients with central auditory problems must be seen on a consistent basis in order to learn about the disorder (see auditory disorders clinic). The second is research activity. In order to be on the "cutting edge" of clinical care an active research program is essential (see Neuroaudiology Lab).

Welcome | Frank Musiek - University of Arizona  
An Auditory Processing Disorder (APD) occurs when an individual has documented difficulties processing auditory information. These types of listening difficulties are often described as a "central" auditory processing deficit, as the difficulties occur even when a child or adult presents with normal hearing. Evaluation for a CAPD is completed by an audiologist, yet also often involves other specialists to help rule out any other concomitant deficits.

Central Auditory Processing Disorders Clinic ...  
Central auditory disorder is a continuum of dysfunction involving the processing and interpretation of sounds, ranging from detecting the presence of simple sounds to comprehending complex auditory stimuli such as environmental sounds and music.

Cognitive aspects of central auditory disorders | MedLink ...
