Cisco 2901 Integrated Services Router - Cisco

On the Cisco 2901 router, the numbering format for configuring an asynchronous interface is 0/slot/port. To configure the line associated with an asynchronous interface, simply use the interface number to specify the asynchronous line. For example, line 0/1/0 specifies the line associated with interface serial 0/1/0 on a WIC-2A/S in slot 1.

Basic Router Configuration - Cisco

Configuring a cisco 2901 router 1. How to Configuring a Cisco 2901 Router? Here we've put together the configuration process for the new CISCO 2901 router. This the most common router supplied by the fibre internet providers in Australia when you ask for connectivity without PPPoE. Step1.

Configuring a cisco 2901 router - SlideShare

If you did what I think, you set the router's configuration to the factory default. With password recovery, you set the config register to 0x2142 and then reboot the router. It will reboot with the factory default config but the actual config is still in NVRAM. In this mode you are supposed to "copy start run" which loads the actual configuration.

2901 router configuration - Cisco Community

The Cisco 2901 Integrated Services Router (ISR) delivers highly secure data, voice, video, and application services for small offices. Key features include: 2 integrated 10/100/1000 Ethernet ports; 4 enhanced high-speed WAN interface card slots; 2 onboard digital signal processor (DSP) slots; 1 onboard Internal Service Module for application services
