Interview Questions and

Answers 1 What is

Normalization

Normalization is the

process of organizing

# Get Free Database

the columns tables of a database to minimize the redundancy of data. Normalization involves in dividing large tables into smaller tables and defining relationships between them.

Normalization is used in OLTP systems.

The words  
normalization and

# Get Free Database

normalization refer to the structure of a database.

Normalization was developed by IBM

researcher E.F. Codd In the 1970s.

Normalization increases clarity in organizing data in Databases.

Normalization of a Database is achieved by following a set of rules called 'forms' in creating the database. Database
