In essence, DNS is simply a database that links meaningful names (known as host names), such as <http://www.microsoft.com>, to a specific IP address, such as 192.168.124.1. Simply linking addresses to names is just the beginning, though, because DNS has many more features in addition to host-name-to-address mapping.

### **DNS: What It Is and What It Does - dummies**

queries through: Recursive DNS Servers (or Caching Servers, sounds like "caching") and Authoritative Servers (what DNS Made Easy provides). In a nutshell, Authoritative DNS servers store the "maps" of your domain names to IP addresses. This domain name to IP mapping is usually configured by system administrators.
