What does it mean to be a woman? The current cultural ideal for womanhood encourages women to be strident, sexual, self-centered, independent -- and above all -- powerful and in control. But sadly, this model of womanhood hasn't delivered the happiness and fulfillment it promised. The Bible teaches that it's not up to us to decide what womanhood is all about. God created male and female for a very specific purpose. His design isn't arbitrary or unimportant. It is very intentional and He wants women to discover, embrace, and delight in the beauty of His design. He's looking for True Women! Bible teachers Mary A. Kassian and Nancy Leigh DeMoss share the key fundamentals of biblical womanhood in this eight week study. Each week includes five daily individual

lessons leading to a group time of sharing and digging deeper into God's Word. And to enhance this time of learning together, on-line videos are available featuring Mary and Nancy as they encourage women to discover and embrace God's design and mission for their lives. A True Woman Book The goal of the True Woman publishing line is to encourage women to: Discover, embrace, and delight in God's divine design and mission for their lives Reflect the beauty and heart of Jesus Christ to their world Intentionally pass the baton of Truth on to the next generation Pray earnestly for an outpouring of God's Spirit in their families, churches, nation and world

As China, India, and other industrializing giants grow, they are confronted with an inconvenient truth: They cannot rely on the conventions of capitalism as we know them today. Western industrialism has achieved miracles, promoting unprecedented levels of prosperity and raising hundreds of millions out of poverty. Yet, if allowed to proceed unencumbered, this paradigm will do irreversible harm to the planet. By necessity, a new approach to environmentally conscious development is already emerging in the East, with China leading the way. Positioning its argument against zero-growth advocates and free-market environmentalists, Greening of Capitalism charts this transformation and sketches out a framework for more sustainable capitalism. State-

mandated changes in energy use (as opposed to carbon taxes), a circular flow of resources (as opposed to emissions standards), and the introduction of new financial instruments that support green growth are cornerstones of China's framework. John A. Mathews argues that these tenets will be emulated around the world—first in India and Brazil. In light of this emerging shift, Mathews considers core debates over national security, international relations, and economic policy, ultimately addressing the question of whether these measures will be far-reaching or timely enough to prevent further damage.
