To compute the value of the flexible budget, multiply the variable cost per unit by the actual production volume. Here, the figure indicates that the variable costs of producing 125,000 should total \$162,500 (125,000 units x \$1.30). Compare the flexible budget to actual results

How to Implement a Flexible Budget - dummies

A flexible budget is usually designed to predict effects of changes in volume and how that affects revenues and expenses. In order to accurately predict the changes in costs, management has to identify the fixed costs and the variable costs. Fixed costs will be constant within relevant range of operations where the variable costs will continue to increase as production increases.
