Mines are becoming more mechanized and extensive, resulting in the deterioration of work place environment. In order to improve this, more stringent legislative standards are being formulated and applied to the mining industry globally. Keeping this in view, it has been the main goal of the professionals in academia, government and the private sector to bring improvement in the mine atmosphere and mitigate its hazards. Due to their efforts there has been impressive professional progress in the area of mine ventilation and safety. However, mine

disasters continue to occur throughout the world. Therefore, a need has been felt for further advances in planning, designing and managing of mines and more effective sharing of experience amongst the different countries of the world particularly with reference to health and safety of miners. This book has been written to provide information about all aspects of Mine Ventilation. The book will serve as a valuable reference to researchers, technologists, academicians, post graduate students, statutory officials and all other concerned with the improvement in work place environment, both in opencast and underground mines throughout the world.

The objective of this book is to provide the fundamental comprehension of a broad range of topics in an integrated volume such that readership hailing from diverse disciplines can rapidly acquire the

Since the first edition of Open Source GIS: A GRASS GIS Approach was published in 2002, GRASS has undergone major improvements. This second edition includes numerous updates related to the new development; its text is based on the GRASS 5.3 version from December 2003. Besides changes related to GRASS 5.3 enhancements, the introductory chapters have been re-organized, providing more extensive information on import of external data. Most of the improvements in technical accuracy and clarity were based on valuable feedback from readers. Open Source GIS: A GRASS GIS Approach, Second Edition, provides updated information about the use of GRASS, including geospatial modeling with raster, vector, and site data, image processing, visualization, and coupling with other open source tools for

The goal of this book is to develop a programmatic tool called individuation which roughly works as a theory of prominence in language. To make the idea of individuation more concrete, I use it as a linguistic feature in the present implementation of the programme. The linguistic elements which are more individuated contain more information than others (paradigmatically) and are more prominent than their syntagmatic

neighbours. There are some tools in a language which are used by the speakers to make any linguistic element more individuated, therefore, more prominent. Emphasizers, demonstratives and classifiers are some of them. The theoretical approach taken in this book follows Nicolas Ruwet and his hermeneutic way of studying linguistics. This approach not only considers the grammatical aspect of a linguistic study but also accounts for the psychological aspects of a communication, a speaker, and a hearer, as these appear in a linguist's consciousness. I relate Ruwet's work with Indian study of meaning and philosophy of language, viz., with Bhartrhari's sphota theory. Meaning is understood from the words on the basis of their manifestation as objects of the sense of hearing. Based on this idea of Bhartrhari, the present work places the hearer in a very important

position in a linguistic theory. Therefore, the grammatical properties of what is said are not determined from something present in the formal object but in the generosity of a patient listener who takes on board the linguistic as well as social context of an act of speaking.

Beginning with an overview of the distribution and utilization of healthcare facilities in developing countries, this book presents an in-depth investigation of the role they play in Mau district, India. It analyses primary data collected through a sample survey of 680 households selected from 31 villages and two urban centres of Mau district. It then moves on to discuss the conceptual and theoretical framework of healthcare facilities, throwing light on the variation in their availability, accessibility and affordability. The book then considers the distribution of

healthcare facilities, focusing on their spatio-temporal change and rural-urban variations, before moving on to addressing the relationship between the socio-economic characteristics of inhabitants and their utilization pattern of healthcare facilities in the area studied.
