However, the quality of each frozen product is affected by the following: the freshness of the product used; the methods of preparation; the packaging

Freezing Fruits & Vegetables

High-acid foods include most fruits and fruit products. In addition, low acid vegetables can be canned using tested recipes for pickles, relish, and tomato products, which contain added acid, usually vinegar. Pressure canning low-acid foods such as plain vegetables requires a pressure canner. A pressure canner reaches 240°F, which destroys heat-resistant organisms that can cause food poisoning, primarily botulism.
