Larger Tires
In this figure, the diameter of the gear on the left is twice that of the gear on the right. The gear ratio is therefore 2:1 (pronounced "two to one"). If you watch the figure, you can see the ratio: Every time the larger gear goes around once, the smaller gear goes around twice.

How Gear Ratios Work | *HowStuffWorks*

You work out the gear range of the cassette by dividing the biggest cog by the smallest, so $42/10 = 4.20 = 420\%$. By working out the gear range of your cassette, you will notice that even a small difference in the smallest cog can make a massive difference overall.

How to find the perfect gear ratios for your MTB ...

But the easiest way to figure out the right ratio is to lower it the same percentage you increased the tire diameter over stock. For example, imagine your 4x4 came from the factory with 32-inch tires and 4.10 axle

Access PDF Gear Ratio Guide For

gears. Upgrading to 37-inch tires would calculate to about a 16 percent increase in tire diameter.

A Guide To Gearing - The Dirt by 4WP

A typical gear ratio for a 20" bmx bike is 2.75:1.

This means that the front sprocket is 2.75 times larger than the rear sprocket, or that the

Access PDF Gear Ratio Guide For

Larger Tires
rear wheel will make 2.75 rotation for every full rotation of the cranks. The standard for bmx bikes for many years was 44/16. Mathematically, 16 times 2.75 is 44 and 44 divided by 2.75 is 16.

Let's take a 6.4:1 gear ratio fishing reel for an example. In this case, every time you turn the handle of your reel one complete turn – the spool of the reel, which holds the fishing line, makes exactly 6.4 turns. This is due to the output gear (connected to the spool) being bigger than the input gear

Access PDF Gear Ratio Guide For (connected to the handle).

Choosing the Best Gear Ratio Fishing Reel For You

Most people tend to think that a gear ratio with bigger numbers, like 7.5:1, is a higher gear ratio. But that's not true. The proper terminology for this would be that it is a high-

Access PDF Gear Ratio Guide For

larger Tires speed gear ratio, not a high gear ratio. Reels having gear ratios with higher numbers are actually geared lower than reels with lower numerical gear ratios.

Understanding Fishing Reel Gear Ratios - Tackle Test

If the gear ratio of gear A to gear B is 4:1, we know the following. The

Acces PDF Gear Ratio Guide For

Larger Tires
radius, diameter, and circumference of gear A are all four times larger than gear B. We know that the torque on gear A will be four times greater than the torque on gear B. Finally we know that gear A will rotate at one fourth the speed of gear B.
