ISO 8501-1 is a pictorial standard relating to surface cleanliness,  
amongst other methods, though abrasive blasting. The original  
condition of steel surfaces prior to blasting are depicted in various  
stages of corrosion as follows: Grade A Steel surface largely  
covered with adhering mill scale but little, if any rust

Iso 8501 1 Free - redditlater.com

ISO 8501, ISO 8502 and ISO 8503 do not contain recommendations for the protective systems to be applied to the steel surface. Neither do they contain recommendations for the preparation grades for specific situations even though surface quality can have a direct influence on the choice of protective coating to be applied and on its performance.

Iso 8501 1 Free - [rmapi.youthmanual.com](http://rmapi.youthmanual.com)

ISO 8501-1 is a visual reference and does not explicitly state percentages. The specifications specifically mention stains, streaks and shadows, but they are practically the same: a residue showing a difference in color but of no discernible thickness. Tightly adhered material refers to anything that cannot be peeled off with a dull putty knife.

Surface Preparation Standards Explained - SSPC/NACE & ISO 8501

ISO 8501, ISO 8502 and ISO 8503 do not contain recommendations for the protective systems to be applied to the steel surface. Neither do they contain recommendations for the preparation grades for specific situations even though surface quality can have a direct influence on the choice of protective coating to be applied and on its performance. Such recommendations are found in other documents
