Now in its third edition, *Mathematical Concepts in the Physical Sciences* provides a comprehensive introduction to the areas of mathematical physics. It combines all the essential math concepts into one compact, clearly written reference.

Buildings are one of the main causes of the emission of greenhouse gases in the world. Europe alone is responsible for more than 30% of emissions, or about 900 million tons of CO₂ per year. Heating and air conditioning are the main cause of greenhouse gas emissions in buildings. Most buildings currently in use were built with poor energy efficiency criteria or, depending on the country and the date of construction, none at all. Therefore, regardless of whether construction regulations are becoming stricter, the real challenge nowadays is the energy rehabilitation of existing buildings. It is currently a priority to reduce (or, ideally, eliminate) the waste of energy in buildings and, at the same time, supply the necessary energy through renewable sources. The first can be achieved by improving the architectural design, construction methods, and materials used, as well as the efficiency of the facilities and systems; the second can be achieved through the integration of renewable energy (wind, solar, geothermal, etc.) in buildings. In any case, regardless of whether the energy used is renewable or not, the efficiency must always be taken into account. The most profitable and clean energy is that which is not consumed.

Existing accounts of Australian Aboriginal English do not investigate the significant degree of variation found across the continent. This book presents the first description of English spoken on Croker Island, Northern Territory, Australia, in terms of its history, linguistic features and connections to local Aboriginal languages. It demonstrates that English on Croker Island shows an extremely high degree of intra- and inter-speaker variation and embedding in a longstanding multilingual contact situation, both of which challenge existing models of variation and language contact. These results have significant ramifications for how variation is modelled, for our understanding of how postcolonial Englishes develop, as well as for the dynamics of complex contact situations. The book also puts English on Croker Island into a typological context of World Englishes by establishing a profile according to the parameters of the World Atlas of Varieties of English (WAVE). It is of interest to academics interested in Australian Aboriginal English, language contact, World Englishes and Australian Aboriginal languages.

When a country is threatened by an insurgency, what efforts give its government the best chance of prevailing? Contemporary discourse on this subject is voluminous and often contentious. Advice for the counterinsurgent is often based on little more than common sense, a general understanding of history, or a handful of detailed examples, instead of a solid, systematically collected body of historical evidence. A 2010 RAND study challenged this trend with rigorous analyses of all 30 insurgencies that started and ended between 1978 and 2008. This update to that original study expanded the data set, adding 41 new cases and comparing all 71 insurgencies begun and completed worldwide since World War II. With many more cases to compare, the study was able to more rigorously test the previous findings and address critical questions that the earlier study could not. For example, it could examine the approaches that led counterinsurgency forces to prevail when an external actor was

Online Library Jan 2009 F211 Past Paper Grade Boundaries

involved in the conflict. It was also able to address questions about timing and duration, such as which factors affect the duration of insurgencies and the durability of the resulting peace, as well as how long historical counterinsurgency forces had to engage in effective practices before they won. A companion volume, *Paths to Victory: Detailed Insurgency Case Studies*, offers in-depth narrative overviews of each of the 41 additional cases; the original 30 cases are presented in *Victory Has a Thousand Fathers: Detailed Counterinsurgency Case Studies*.

This volume constitutes the refereed proceedings of the 4th IFIP WG 11.2 International Workshop on Information Security Theory and Practices: Security and Privacy of Pervasive Systems and Smart Devices, WISTP 2010, held in Passau, Germany, in April 2010. The 20 revised full papers and 10 short papers were carefully reviewed and selected from 69 submissions. They are organized in topical sections on embedded security, protocols, highly constrained embedded systems, security, smart card security, algorithms, hardware implementations, embedded systems and anonymity/database security.

Written by outstanding authorities from all over the world, this comprehensive new textbook on pediatric and neonatal ventilation puts the focus on the effective delivery of respiratory support to children, infants and newborns. In the early chapters, developmental issues concerning the respiratory system are considered, physiological and mechanical principles are introduced and airway management and conventional and alternative ventilation techniques are discussed. Thereafter, the rational use of mechanical ventilation in various pediatric and neonatal pathologies is explained, with the emphasis on a practical step-by-step approach. Respiratory monitoring and safety issues in ventilated patients are considered in detail, and many other topics of interest to the bedside clinician are covered, including the ethics of withdrawal of

Online Library Jan 2009 F211 Past Paper Grade Boundaries

respiratory support and educational issues. Throughout, the text is complemented by numerous illustrations and key information is clearly summarized in tables and lists.

"A clear grasp of economics is essential to understanding why environmental problems arise and how we can address them. ... Now thoroughly revised with updated information on current environmental policy and real-world examples of market-based instruments The authors provide a concise yet thorough introduction to the economic theory of environmental policy and natural resource management. They begin with an overview of environmental economics before exploring topics including cost-benefit analysis, market failures and successes, and economic growth and sustainability. Readers of the first edition will notice new analysis of cost estimation as well as specific market instruments, including municipal water pricing and waste disposal. Particular attention is paid to behavioral economics and cap-and-trade programs for carbon."--Publisher's web site.

During the French wars (1793-1801, 1803-1815) the system of promotion to flag rank in the Royal Navy produced a cadre of admirals numbering more than two hundred at its peak. These officers competed vigorously for a limited number of appointments at sea and for the high honours and significant financial rewards open to successful naval commanders. When on active service admirals faced formidable challenges arising from the Navy's critical role in a global conflict, from the extraordinary scope of their responsibilities, and from intense political, public and professional expectations. While a great deal has been written about admirals' roles in naval operations, other aspects of their professional lives have not been explored systematically. *British Flag Officers in the French Wars, 1793-1815* considers the professional lives of well-known and more obscure admirals, vice-admirals and rear-admirals. It examines the demands of naval

Online Library Jan 2009 F211 Past Paper Grade Boundaries

command, flag officers' understanding of their authority and their approach to exercising it, their ambitions and failures, their professional interactions, and their lives afloat and onshore. In exploring these themes, it draws on a wide range of correspondence and other primary source material. By taking a broad thematic approach, this book provides a multi-faceted account of admirals' professional lives that extends beyond the insights that are found in biographical studies of individual flag officers. As such, it will be of great interest to students and scholars of British naval history.

Student Unit Guides are perfect for revision. Each guide is written by an examiner and explains the unit requirements, summarises the relevant unit content and includes a series of specimen questions and answers. There are three sections to each guide: Introduction - includes advice on how to use the guide, an explanation of the skills being tested by the assessment objectives, an outline of the unit or module and, depending on the unit, suggestions for how to revise effectively and prepare for the examination questions. Content Guidance - provides an examiner's overview of the module's key terms and concepts and identifies opportunities to exhibit the skills required by the unit. It is designed to help students to structure their revision and make them aware of the concepts they need to understand the exam and how they might analyse and evaluate topics. Question and Answers - sample questions and with graded answers which have been carefully written to reflect the style of the unit. All responses are accompanied by commentaries which highlight their respective strengths and weaknesses, giving students an insight into the mind of the examiner.
