Water quality standards across the world are being re-written to promote healthier ecosystems, ensure safe potable water sources, increased biodiversity, and enhanced ecological functions. Treatment wetlands are used for treating a variety of pollutant waters, including municipal wastewater, agricultural and urban runoff, industrial effluents, and combined sewer overflows, among others. Treatment wetlands are particularly well-suited for sustainable water management because they can cope with variable influent loads, can be constructed of local materials, have low operations and maintenance requirements compared to other treatment technologies, and they can provide additional ecosystem services. The technology has been successfully implemented in both developed and developing countries. The first IWA Scientific and Technical Report (STR) on Wetland Technology was published in 2000. With the exponential development of the technology since then, the generation of a new STR was facilitated by the IWA Task Group on Mainstreaming Wetland Technology. This STR was conceptualized and written by leading experts in the field. The new report presents the latest technology applications within

an innovative planning framework of multi-purpose wetland design. It also includes practical design information collected from over twenty years of experience from practitioners and academics, covering experiments at laboratory and pilot-scale up to full-scale applications. It may be the Golden State, but your garden can be any color you want it to be. California is already famous as one of the world's leading fruit and vegetable producers--but a glance at a valley oak or California buckwheat is just a small glimpse of the native plants the state has to offer the home gardener. Written by Alameda resident and longtime gardening journalist Claire Splan, California Month-by-Month Gardening is the sister manual to our California Getting Started Garden Guide. Inside, Splan dedicates a thoroughly detailed chapter to each month of the year, telling you what species you should consider planting, precisely when you should plant them, and how to care for them for maximum health. Within each month are recommendations for annuals, bulbs, lawns (and lawn alternatives), natives, perennials, roses, shrubs, trees, vines, and groundcovers. An introductory overview of California's microclimates and soil types, along with a primer on general gardening techniques and a color-coded USDA zone map, prepares you to make your best effort as a gardener in California. Splan's instructions go much further than just the basics, as you learn how to plan, plant, care for, water, fertilize, and troubleshoot your diverse garden spaces during every single month of the year. Fully illustrated with beautiful color photography of the "how to" steps and plants, California Month-by-Month Gardening keeps your garden prosperous through all types of California weather and terrain. For our full introduction to gardening in California, we also recommend companion books California Getting Started
