## Lesson 12 3 Simplifying Rational Expressions Answers

Lesson 1: Simplifying Rational Algebraic Expressions After going through this module, you are expected to: 1. identify if the given algebraic expression is in simplest form; 2. express rational algebraic expressions in simplest form; and 3. appreciate the application of rational algebraic expression in real-life situations

## Quarter 1 Module 4 Simplifying Rational Algebraic Expressions

Simplify Rational Expressions by cancelling out common factors. This feature is not available right now. Please try again later.

## Lesson 12.2: Simplifying Rational Expressions

Before multiplying, you should first divide out any common factors to both a numerator and a denominator. To Multiply Rational Expressions. 1. Factor all numerators and denominators completely. 2. Divide out common factors. 3. Multiply numerators together and multiply denominators together.

## 11 3 Skills Practice Simplifying Rational Expressions ...

Check It Out! Example 3 . Simplify each rational expression, if possible. a. b. Factor the numerator and the denominator when possible. Divide out common factors. Simplify. 24 Recall from Chapter 8 that opposite binomials can help you factor polynomials. Recognizing opposite binomials can also help you simplify rational expressions. 25

## **12-2: SIMPLIFYING RATIONAL EXPRESSIONS**

Steps for Simplifying Rational Expressions: 1. remove parentheses and combine like terms (if necessary) 2. factor all the polynomials 3. cancel common factors A rational expression is simplified if its numerator and denominator have no common factors other than 1, just like the rational expression  $\frac{2}{2}$ . It is imperative that you understand how to factor polynomials prior
