LoRa (Lo ng Ra nge) is a low-power wide-area network (LPWAN) protocol developed by Semtech. It is based on spread spectrum modulation techniques derived from chirp spread spectrum (CSS) technology. It was developed by Cycleo of Grenoble, France and acquired by Semtech, the founding member of the LoRa Alliance.

LoRa - Wikipedia
The LoRa Alliance \u2122 is the fastest growing technology alliance. A non-profit association of more than 500 member companies, committed to enabling large scale deployment of Low Power Wide Area Networks (LPWAN) IoT through the development and promotion of the LoRaWAN \u2122 open standard.

LoRa (short for long range) is a spread spectrum modulation technique derived from chirp spread spectrum (CSS) technology. Semtech\u2019s LoRa devices and wireless radio frequency technology is a long range, low power wireless platform that has become the de facto technology for Internet of Things (IoT) networks worldwide.

What is LoRa? | Semtech LoRa Technology | Semtech
LoRa, essentially, is a clever way to get very good receiver sensitivity and low bit error rate (BER) from inexpensive chips. That means low-data rate applications can get much longer range using LoRa rather than using other comparably priced radio technologies. Sometimes people also say LoRa when they mean LoRaWAN. But LoRaWAN is different.

LoRa - SparkFun Electronics
LoRa is a proprietary wireless RF technology, belonging to Semtech which also is one of the driving forces behind the LoRa Alliance where the open LoRaWAN protocol and ecosystem is developed and keeps being developed. The LoRa Alliance has hundreds of members since it was founded in 2015.

LoRa is a proprietary modulation system sold by Semtech corporation. They are defacto the only chipset manufacturer or license holder for LoRa. NB-IoT is based on standard modulation types, but as is typical of 3GPP, there will be other IP license holders asking for money eventually.

Click on the yellow button above to follow me. I'm J. L. Lora and am a Dominican-American author. My stories explore the dark side of good characters, people living in the gray areas of life while playing the cards life has dealt them. Through them, I manifest my love for strong heroines and their equally powerful Men.

LoRa Node: The LoRa node devices are usually connected to terminal devices such as actuators and sensors. Usually, a LoRa local area network consists of many LoRa nodes and a LoRa gateway. The nodes are connected to the gateway via the LoRa protocol and then the gateway connected to the Internet of Things via wifi, ethernet or other ways.
