8LT1013/LT1014APPLICATIONS INFORMATION(b) When the input is more than 400mV below ground (at25°C), the input stage saturates (transistors Q3 and Q4)and phase reversal occurs at the output. This can cause lock-up in servo systems. Due to a unique phase reversalprotection circuitry (Q21, Q22, Q27, Q28), the LT1013/1014's outputs do not reverse, as illustrated below, even datasheet search ...
