Approximately 77 percent of the freshwater used in the United States comes from surface-water sources and is subject to natural organic matter contamination according to the United States Geological Survey. This presents a distinct challenge to water treatment engineers. An essential resource to the latest breakthroughs in the characterization, treatment and removal of natural organic matter (NOM) from drinking

# Online Library Motheo Examination Paper 2014 Eletrical Engineer

water, Natural Organic Matter in Waters: Characterization and Treatment Methods focuses on advance filtration and treatment options, and processes for reducing disinfection byproducts. Based on the author's years of research and field experience, this book begins with the characterization of NOM including: general parameters, isolation and concentration, fractionation, composition and structural analysis and biological testing. This is followed by removal methods such as inorganic coagulants, polyelectrolytes and composite coagulants. Electrochemical and membranes

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

removal methods such as: electrocoagulation, electrochemical oxidation, microfiltration and ultrafiltration, nanofiltration and membrane fouling. Covers conventional as well as advanced NOM removal methods Includes characterization methods of NOM Explains removal methods such as: removal by coagulation, electrochemical, advanced oxidation, and integrated methods

This authoritative volume explores the fundamental concepts and numerous applications of targeted delivery of drugs to the body. This compilation has been divided

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

into eight sections comprised of the basic principles of drug targeting, disease and organ/organelle-based targeting, passive and active targeting strategies, and various advanced drug delivery tools such as functionalized lipidic, polymeric and inorganic nanocarriers. Together, the twenty-three chapters cover a wide range of topics in the field, including tumor and hepatic targeting, polymer-drug conjugates, nanoemulsion, physical and biophysical characteristics of nanoparticles, and in vivo imaging techniques, among others. The book also examines advanced characterization

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

techniques, regulatory hurdles and toxicity-related issues that are key features for successful commercialization of targeted drug delivery system products. Targeted Drug Delivery is a comprehensive reference guide for drug delivery researchers, both beginners and those already working in the field.

This book focuses on innovative treatment technologies for the elimination of emerging contaminants in wastewater and drinking water treatment processes. The book also discusses sources and occurrence of emerging contaminants in municipal and industrial

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

waste, giving an overview of state-of-the-art analytical methods for their identification. Further important aspects covered include the acute and chronic effects and overall impact of emerging contaminants on the environment.

The subject of 'Intrinsically Conducting Polymers: an Emerging Technology' was addressed at the NATO Advanced Research Workshop held in Burlington, Vermont, U.S.A. in October 1992. Approximately 30 invited scientists from 11 different countries attended the workshop and 24 lectures were given discussing in detail the most important

# Online Library Motheo Examination Paper 2014 Eletrical Engineer

processing techniques and applications of conducting polymers, along with the basic materials science aspects. The results was the present book, which, for the first time, addresses progress in materials science related to polymers presently on the market and to already existing applications, as well as to future applications. This book covers mostly existing and future applications of intrinsically conducting polymers. Among these applications are the redox-type, such as batteries and electrochemical actuators and artificial muscles. Capacitors, microlithography and transistor uses are

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

addressed. The use of conducting polymers as 'smart' materials in sensor/indicator types of applications is discussed. ESD applications and EMI shielding are subjects that conducting polymers are sought after for. Microwave properties for radar/microwave absorption and for plastics joining/welding are discussed. Also, this book discusses materials processing for the various applications, including fabrication of fibers, textiles, colloids and films/coatings. This book will be an important addition to the libraries of every institution involved in this emerging

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

technology.

This book, focusing on the agriculture sector, provides useful analysis of the green economy implementation context and a practical framework for implementing vegetable crop production green economy projects. The book addresses a distinct gap, as there are currently no guidelines available for planning and implementing green economy projects in the agriculture sector. The book combines information from desktop reviews and field research on vegetable production in a green economy context in

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

South Africa in order to bridge the gap between the theoretical green economy concept and practical implementation issues that would be encountered at the project level. It includes a step-by-step process for translating abstract green economy principles into tangible projects on the ground, so that the potential benefits of a green economy are realizable.

Authors Dave Nelson and Mike Cox combine the best of the laboratory and best of the classroom, introducing exciting new developments while communicating basic

# Online Library Motheo Examination Paper 2014 Eletrical Engineer

principles of biochemistry.

This volume discusses the theoretical fundamentals and potential applications of the original electro-Fenton (EF) process and its most innovative and promising versions, all of which are classified as electrochemical advanced oxidation processes. It consists of 15 chapters that review the latest advances and trends, material selection, reaction and reactor modeling and EF scale-up. It particularly focuses on the applications of EF process in the treatment of toxic and persistent organic pollutants in

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

water and soil, showing highly efficient removal for both lab-scale and pre-pilot setups. Indeed, the EF technology is now mature enough to be brought to market, and this collection of contributions from leading experts in the field constitutes a timely milestone for scientists and engineers.

An A-to-Z of doping including its definition, its importance, methods of measurement, advantages and disadvantages, properties and characteristics—and role in conjugated polymers The versatility of polymer materials is expanding because of the introduction of

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

electro-active behavior into the characteristics of some of them. The most exciting development in this area is related to the discovery of intrinsically conductive polymers or conjugated polymers, which include such examples as polyacetylene, polyaniline, polypyrrole, and polythiophene as well as their derivatives. "Synmet" or "synthetic metal" conjugated polymers, with their metallic characteristics, including conductivity, are of special interest to researchers. An area of limitless potential and application, conjugated polymers have sparked enormous interest, beginning in 2000

# Online Library Motheo Examination Paper 2014 Eletrical Engineer

when the Nobel Prize for the discovery and development of electrically conducting conjugated polymers was awarded to three scientists: Alan J. Heeger, Alan G. MacDiarmid, and Hideki Shirakawa. Conjugated polymers have a combination of properties—both metallic (conductivity) and polymeric; doping gives the conjugated polymer's semiconducting a wide range of conductivity, from insulating to low conducting. The doping process is a tested effective method for producing conducting polymers as semiconducting material, providing a substitute for inorganic

# Online Library Motheo Examination Paper 2014 Eletrical Engineer

semiconductors. Doping in Conjugated Polymers is the first book dedicated to the subject and offers a comprehensive A-to-Z overview. It details doping interaction, dopant types, doping techniques, and the influence of the dopant on applications. It explains how the performance of doped conjugated polymers is greatly influenced by the nature of the dopants and their level of distribution within the polymer, and shows how the electrochemical, mechanical, and optical properties of the doped conjugated polymers can be tailored by controlling the size and mobility of the dopants counter ions. The

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

book also examines doping at the nanoscale, in particular, with carbon nanotubes.

Readership The book will interest a broad range of researchers including chemists, electrochemists, biochemists, experimental and theoretical physicists, electronic and electrical engineers, polymer and materials scientists. It can also be used in both graduate and upper-level undergraduate courses on conjugated polymers and polymer technology.

Engineering of nanophase materials and devices is of vital interest in electronics,

# Online Library Motheo Examination Paper 2014 Eletrical Engineen

semiconductors and optics, catalysis, ceramics and magnetism. Research associated with nanoparticles has widely spread and diffused into every field of scientific research, forming a trend of nanocrystal engineered materials. Electrochemical methods are widely used for the preparation of nanoparticles and the electrochemical properties of such nanomaterials are most relevant for their applications. This comprehensive reference work will appeal to advanced graduate students and researchers in the field specialized in electrochemistry, materials physics and materials science.
