This book demonstrates how to use multilevel and longitudinal modeling techniques available in the IBM SPSS mixed-effects program (MIXED). Annotated screen shots provide readers with a step-by-step understanding of each technique and navigating the program. Readers learn how to set up, run, and interpret a variety of models.

ABSTRACT. This is the first book to demonstrate how to use  
the multilevel and longitudinal modeling techniques available  
in IBM SPSS Version 18. The authors tap the power of  
SPSS's Mixed Models routine to provide an elegant and  
accessible approach to these models.

Multilevel and Longitudinal Modeling Using Stata, Third Edition, by Sophia Rabe-Hesketh and Anders Skrondal, looks specifically at Stata's treatment of generalized linear mixed models, also known as multilevel or hierarchical models. These models are "mixed" because they allow fixed and random effects, and they are "generalized" because they are appropriate for continuous Gaussian responses as well as binary, count, and other types of limited dependent variables.

processes using multilevel multivariate models, e.g. to adjust for selection bias in estimating effect of parental divorce on children's education

## *Multilevel Models for Longitudinal Data*

Multilevel modeling offers a unique framework for analyzing longitudinal data because. It tolerates missing waves of data; It tolerates differently spaced waves of data from different subjects; It accounts for correlations of observations across time; It allows you to study changes over time, such as changes in elevation and slope.

FHS, and depressive symptoms longitudinally. Results: NAI and FHS were both positively associated with depressive symptoms.

## *Multilevel and longitudinal modeling with IBM SPSS*

Multilevel modeling is complicated to grasp, and turning the explanatory model into an actual analysis is a key bridge. Unfortunately, that seems to be where this book falls short. It goes over and over principles that, once you understand them, become tedious to wade through.

of repeated measures data. Multilevel modeling for repeated measures data is most often discussed in the context of modeling change over time (i.e. growth curve modeling for longitudinal designs); however, it may also be used for repeated measures data in which time is not a factor.
