Nervous System Study Guide Content 1. The Nervous System. Functions of the Nervous System. 1. Gathers information from both inside and outside the body - Sensory Function 2. Transmits information to the processing areas of the brain and spine 3. Processes the information in the brain and spine - Integration Function 4.

Nervous System Study Guide Content Mastery
The central nervous system, or CNS, consists of the brain and spinal cord. It's the part that interprets the incoming sensory information and then issues the orders, so I like to think of it as the...

The Human Nervous System: Parts & Functions - Study.com
1.The Central Nervous System comprises of the brain and the spinal cord whereas the Peripheral Nervous System comprises of the autonomic nervous system and the somatic nervous system. 2. CNS processes and sends out signals and PNS is for sensory info 3. PNS can heal itself.

Nervous System Study Guide Flashcards | Quizlet
The nervous system is a network of neurons whose main feature is to generate, modulate and transmit information between all the different parts of the human body. This property enables many important functions of the nervous system, such as regulation of vital body functions (heartbeat, breathing, digestion), sensation and body movements. Ultimately, the nervous system structures preside over everything that makes us human; our consciousness, cognition, behaviour and memories.

Nervous system: Structure, function and diagram | Kenhub
Pathophysiology Chapter 13 Study Guide 1. Identify the functional divisions of the nervous system. 2. List the structures contained within the central and peripheral nervous systems. 3. Explain the difference between a dendrite and an axon. 4. Discuss the functional significance of myelin and the nodes of Ranvier. 5.
