A short equation, Pythagorean Theorem can be written in the following manner: $a^2+b^2=c^2$. In Pythagorean Theorem, c is the triangle's longest side while b and a make up the other two sides. The longest side of the triangle in the Pythagorean Theorem is referred to as the "hypotenuse".

The Pythagorean Theorem relates to the three sides of a right triangle. It states that $c^2 = a^2 + b^2$, C is the side that is opposite the right angle which is referred to as the hypotenuse. A and b are the sides that are adjacent to the right angle. The theorem simply stated is: the sum of the areas of two small squares equals the area of the large one.

The Pythagorean Theorem or Pythagoras' Theorem is a formula relating the lengths of the three sides of a right triangle. If we take the length of the hypotenuse to be c and the length of the legs to be a and b then this theorem tells us that: $c^2 = a^2 + b^2$.

The Pythagorean theorem was reportedly formulated by the Greek mathematician and philosopher Pythagoras of Samos in the 6th century BC. It says that the area of the square whose side is the hypotenuse of the triangle is equal to the sum of the areas of the squares whose sides are the two legs of the triangle.
