Qt 4.8: qmake Manual

qmake lets you create your own features that can be included in project files by adding their names to the list of values specified by the CONFIG variable. Features are collections of custom functions and definitions in .prf files that can reside in one of many standard directories.

Advanced Usage | qmake Manual - Qt

This also sets the variable QMAKE_CONFIG_TESTS_DIR to the config.tests subdirectory of the project's parent directory. It is possible to override this value after loading the feature file. Inside the tests directory, there has to be one subdirectory per test that contains a simple qmake project. The following code snippet illustrates the .pro ...

Test Functions | qmake Manual

This chapter describes how to set up qmake project files for three common project types that are based on Qt: application, library, and plugin. Although all project types use many of the same variables, each of them uses project-specific variables to customize output files. Platform-specific variables are not described here.

Building Common Project Types | qmake Manual

The fundamental behavior of qmake is influenced by variable declarations that define the build process of each project. Some of these declare resources, such as headers and source files, that are common to each platform. Others are used to customize the behavior of compilers and linkers on specific platforms.

Variables | qmake Manual - Qt

qmake provides a number of built-in functions to enable the contents of variables to be processed. The most commonly used function in simple project files is the include()function which takes a filename as an argument. The contents of the given file are included in the project file at the place where the includefunction is used.

Getting Started | qmake Manual

qmake is able to automatically generate build rules for linking against frameworks in the standard framework directory on macOS, located at /Library/Frameworks/. Directories other than the standard framework directory need to be specified to the build system, and this is achieved by appending linker options to the QMAKE_LFLAGS variable, as shown in the following example:
