Terrorism is a psychological weapon; by definition its purpose is to spread terror or fear in order to achieve goals unattainable by more conventional means. It is a weapon of asymmetric warfare whose success or failure is entirely dependent on the psychological reactions of its targets. Despite this, interest in the effects of terrorism from a behavioral and psychological perspective is relatively recent, dating initially from the 1990s and boosted by the events of September 11th 2001. This book presents papers delivered at the NATO Advanced Research Workshop (ARW) Risk Management of Terrorism Induced Stress – Guidelines for the Golden Hours (Who, What and When) held in Odesa, Ukraine, from 16-19 September 2018. The aim of the workshop was to bring together experts from the military, science and policy to revisit old guidelines and inform new research into novel approaches. The focus of the workshop was the so-called 'Golden Hours'; the period immediately following a traumatic event in which therapeutic interventions are thought to have the most impact. What needs to be done in the immediate aftermath of terror, who is vulnerable and who is resilient, and when is intervention appropriate? The book is divided into sections covering the areas of biology, interventions, special populations, additional perspectives, policy, déjà-vu and future directions. Providing a comprehensive overview of the management of terror-related stress, the book will be of interest to planners and policy makers, as well as mental health professionals working with PTSD and other consequences of terror events.

"This is an extremely important and timely book written by a pre-eminent scholar in the field. Hazel Kemshall has a proven track record not just of exceptional scholarship but, equally importantly, of engaging effectively with policy and practice. Given the damaging synergies between media hype and public insecurities about 'dangerous' offenders, the evidence-based, measured and thoughtful analysis provided in this book provides a vital counterpoint to increasingly punitive and exclusionary discourses around public protection. In promoting a more balanced, humane and integrative approach to risk, the book deserves to influence not just scholars but also policy makers and practitioners facing the complex challenges of managing risk and dangerousness." Fergus McNeill, Associate Fellow of the Centre for Sentencing Research, Strathclyde University, UK High risk offenders have attracted much media, policy and practice interest in recent years. New legislation and extensive multi-agency partnerships have been initiated to improve the assessment and management of these offenders in the community. Drawing on a wide range of cross-national literature and original research by the author, this timely book reviews current approaches to the community management of high risk offenders. The book examines in detail a range of risk management techniques, including: Community protection measures (such as sexual offender registration and community notification) Restorative and re-integrative measures (such as Circles of Support and Accountability, pro-social modelling, public health campaigns and environmental risk management approaches) Hazel Kemshall argues for a 'blending' of these two approaches to provide risk management interventions for the 'protective integration' of high risk offenders back into the community. In addition, the book examines contemporary difficulties in risk assessment, effective multi-agency partnership working, and recent policy and legislative initiatives in this challenging area of work. Understanding the Management of High Risk Offenders is a vital resource for criminology and criminal justice students and stimulating reading for probation officers, social workers, police and prison staff, among others.

In the 25 years since the first edition of Comprehensive Gynecology, many scientific advances have occurred in medical practice. The first four editions were largely the work of the original four editors: Drs. William Droegemueller, Arthur L. Herbst, Daniel R. Mishell, Jr., and Morton A. Stenchever...With the staggering volume of medical literature published and the complexities of the gynecologic subspecialties, we have collaborated with additional experts for the sixth edition. We've "examined disease" and added a new chapter on the interaction of medical diseases and female physiology. We've "investigated discord" with new authors to completely rewrite the emotional and psychological issues in gynecology and the legal issues for obstetrician-gynecologists. Other chapters have delved into the controversies in

breast cancer screening, vitamin D use, the ongoing debates in hormone therapy, and vaginal mesh use for pelvic organ prolapse surgery. (from Preface -- MD Consult, viewed April 9, 2012)
