Natural and Artificial Computation. As a pioneer in the field of cybernetics, he enthusiastically promoted interdisciplinary research. The term cybernetics stems from the Greek κυβερνήτης (kybernetes), which means steersman, governor, or pilot, the same root as government. Cybernetics is a

broad field of study, but the essential goal of cybernetics is to understand the functions and processes of systems that have goals, and promote circular, causal chains that move from action to sensing to comparison with a desired goal, and again to action. These de-

tions can be applied to Prof. Mira. He was a leader, a pilot, with a visionary and extraordinary capacity to guide his students and colleagues to the desired objective. In this way he promoted the study and understanding of biological functions for creating new computational

paradigms able to solve known problems in a more efficient way than classical approaches. But he also impressed his magnificent and generous character on all the researchers and friends that worked with him, imprinting in all of us high requirements of excellence not

only as scientists, but also as human beings. We all remember his enthusiastic explanation about the domains and levels in the computational paradigm (CP).

th The 5 International Conference on Hybrid Artificial Intelligence Systems (HAIS 2010) has become a unique,

established and broad interdisciplinary forum for researchers and practitioners who are involved in developing and applying symbolic and sub-symbolic techniques aimed at the construction of highly robust and reliable problem-solving techniques, and bringing the most

Online Library Siemens Td200 User Manual

relevant achievements in this field. Overcoming the rigid encasing imposed by the arising orthodoxy in the field of artificial intelligence, which has led to the partition of researchers into so-called areas or fields, interest in hybrid intelligent systems is growing because they give

Online Library Siemens Td200 User Manual

freedom to design innovative solutions to the ever-increasing complexities of real-world problems. Noise and uncertainty call for probabilistic (often Bayesian) methods, while the huge amount of data in some cases asks for fast heuristic (in the sense of suboptimal

Online Library Siemens Td200 User Manual

and ad-hoc) algorithms able to give answers in acceptable time frames. High dimensionality demands linear and non-linear dimensionality reduction and feature extraction algorithms, while the imprecision and vagueness call for fuzzy reasoning and linguistic variable formalization.

Online Library Siemens Td200 User Manual

Nothing impedes real-life problems to mix difficulties, presenting huge quantities of noisy, vague and high-dimensional data; therefore, the design of solutions must be able to resort to any tool of the trade to attack the problem. Combining diverse paradigms poses challenging

Online Library Siemens Td200 User Manual

problems of computational and methodological interfacing of several previously incompatible approaches. This is, thus, the setting of HAIS conference series, and its increasing success is the proof of the vitality of this exciting field.
