Boilers are pressure vessels designed to heat
water or produce steam, which can then be

Acces PDF Steel Boilers User Guide

used to provide space heating and/or service water heating to a building. In most commercial building heating applications, the heating source in the boiler is a natural gas fired burner. Oil fired burners and electric resistance heaters can be used as well.

Stainless Steel "Duplex Steel Boilers" refers to boilers made using Duplex SAF 2205 Corrosion Resistant Steel boiler. Doug Auburg writes: There is a lot of talk in Australia and New Zealand about Duplex steel boilers (i.e. boilers constructed using a boiler grade stainless steel instead of carbon steel or copper).

There are virtually infinite numbers of boiler designs but generally they fit into one of two categories: Fire tube or "fire in tube" boilers; contain long steel tubes through which the hot gasses from a furnace pass and around which the water to be converted to steam circulates. (Refer Figure 2.2).
