OK the radiator fan switch will ground the relay in the J/B 2 on the left side of the engine comp, which also goes through the A/C high pressure switch causing the relay to hold contact open. When the switch is unplugged the ground will go away and the relay will close. (normally closed relay), (normally closed switch).

My radiator cooling fan no work unless the AC is on,relays ...  
The fans are not increasing your time to warm the engine. The thermostat keeps the coolant from going to the radiator. Diesels warm slowly. In 25 degree weather it would take 12 miles to open the thermostat on mine, on a stop and go country drive of 55 mph or less. But I would get warm air out of the heater in a few miles - warm enough to ...

both radiator fans running constantly | TDIClub Forums  
The problem persists; the engine will reach 200, the thermostat opens (determined by watching the temp. gauge), but the fans do not start. If I disconnect the (new!) temperature sensor, both fans start. I have read that turning the air conditioning on should also cause the fans to turn on, this does not happen (with the temp. sensor plugged in ...

Moreover, the fan belt could also be the issue. In older cars, the fan used to work with the help of an engine. Whenever the engine would start, the radiator fan would start spinning. This was made possible through a belt that derived power from the engine. If this belt broke, your radiator fan would stop working completely.
