Memoirs of Iragani Serasinghe, Sinhalese stage and motion picture actress.

With a new investigative epilogue by a prominent Washington journalist and a new foreword by the author. Ambassador Joseph Wilson recounts more than two decades of foreign service to our country in this unprecedented look at the life of an American diplomat and an unabashed account of policies that sometimes succeeded and sometimes failed. As the last American official to meet with Saddam before Desert Storm, Wilson successfully parried the dictator's threats to use American hostages as human shields against U.S. bombing. Yet today he finds himself battling threats from his own government because he called a lie a lie. When President Bush alleged that Iraq had pursued uranium from Africa for its nuclear weapons program, Wilson could not stand silent. He had traveled to Niger the previous year and found no evidence to support the president's claim. To intimidate Wilson, senior administration officials disclosed the undercover status of Wilson's wife, CIA operative Valerie Plame, to the press, putting her life in danger. Rather than backing down, Wilson persistently criticized the way the administration misled the nation into war. Now he continues his fight in this groundbreaking book by revealing the perils bred by the war-hungry regime in the White House.

It is possible to eliminate death and serious injury from Canada's roads. In other jurisdictions, the European Union, centres in the United States, and at least one automotive company aim to achieve comparable results as early as 2020. In Canada, though, citizens must turn their thinking on its head and make road safety a national priority. Since the motor vehicle first went into mass production, the driver has taken most of the blame for its failures. In a world where each person's safety is dependent on a system in which millions of drivers must drive perfectly over billions of hours behind the wheel, failure on a massive scale has been the result. When we neglect the central role of the motor vehicle as a dangerous consumer product, the result is one of the largest human-made means for physically assaulting human beings. It is time for Canadians to embrace internationally recognized ways of thinking and enter an era in which the motor vehicle by-product of human carnage is relegated to history. No Accident examines problems related to road safety and makes recommendations for the way forward. Topics include types of drivers; human-related driving errors related to fatigue, speed, alcohol, and distraction and roads; pedestrians, cyclists, and public transit; road engineering; motor vehicle regulation; auto safety design; and collision-avoidance technologies such as radar and camera-based sensors on vehicles that prevent crashes. This multi-disciplinary study demystifies the world of road safety and provides a road map for the next twenty years.

The case for a bigger, more complete picture of reality in which a fifth, spiritual dimension plays a central role Many of us today are all too willing to accept a humanist and scientific account of the universe which considers human existence as a fleeting accident. The triumph of John Hick's gripping work is his exposure of the radical insufficiency of this view. Drawing on mystical and religious traditions ancient and modern, and spiritual thinkers as diverse as Julian of Norwich and Mahatma Ghandi, he has produced a tightly argued and thoroughly readable case for a bigger, more complete, picture of reality in which a fifth, spiritual dimension, plays a central role. "Essential reading for anyone concerned with spirituality in the modern world" Professor Keith Ward, University of Oxford Erudite, provocative and deeply moving, Hick's persuasive narrative will prompt all curious readers to re-examine their own spiritual horizons. "This stimulating book opens up many fundamental issues that must concern everyone. It deserves to be widely read." "Expository Times" Learned, lucid and engaging, easy to read and easy to applaud for its sheer clarity of style and its breadth of interest, even when one disagrees with it! Anvil

A glorious meeting of humor, eroticism and duplicity, this modern classic enjoys a major West End revival starring Zoe Wanamaker.

Provides broad and comprehensive coverage of the interaction between the nervous and immune systems in both normal and diseased states. Understanding this interaction is fundamental to developing therapeutic approaches to disease and injury of the nervous system that are currently only marginally amenable to therapy. Neuroimmunology is a well-recognised and growing speciality world wide, both at the basic science and clinical level. Chapters are dedicated to the role of the immune system in disorders affecting both the central and peripheral nervous systems, including important neurodegenerative diseases (such as multiple sclerosis and HIV-related neural degeneration) which cause life-long disability. Extensive coverage is given to a whole array of immune-directed therapies.

Al Alvarez touched down in Las Vegas one hot day in 1981, a dedicated amateur poker player but a stranger to the town and its crazy ways. For three mesmerizing weeks he witnessed some of the monster high-stakes games that could only have happened in Vegas and talked to the extraordinary characters who dominated them—road gamblers and local professionals who won and lost fortunes on a regular basis. Set over the course of one tournament, *The Biggest Game in Town* is both a chronicle of the World Series of Poker—the first ever written—and a portrait of the hustlers, madmen, and geniuses who ruled the high-stakes game in America. It is a brilliant insight into poker's appeal as a hobby, an addiction, and a way of life, and into the skewed psychology of master players and fearless gamblers. With a new introduction by the author, Alvarez's classic account is "the greatest dissection of high-stakes Vegas poker and the madness that surrounds it ever written" (*TimeOut* [UK]).

Chronic liver failure is a frequent condition in clinical practice that encompasses all manifestations of patients with end-stage liver diseases. Chronic liver failure is a multiorgan syndrome that affects the liver, kidneys, brain, heart, lungs, adrenal glands, and vascular, coagulation, and immune systems. *Chronic Liver Failure: Mechanisms and Management* covers for the first time all aspects of chronic liver failure in a single book, from pathogenesis to current management. Each chapter is written by a worldwide known expert in their area and all provide the latest state-of-the-art knowledge. This volume is specifically designed to provide answers to clinical questions to all doctors dealing with patients with liver diseases, not only clinical gastroenterologists and hepatologists, but also to internists, nephrologists, intensive care physicians, and transplant surgeons.
