Tip-Edge is a single wing bracket that does not lose its  
rotational control. The base is every bit as wide as a twin  
bracket. The Tip-Edge technique allows you to utilize the  
maximum prescription built into the bracket for finishing, i.e.,  
100% bracket expression. No other system can achieve that.

The prototype Tip-Edge brackets were therefore derived from a single .022 inch straight-wire bracket merely by cutting away two diametrically opposed corners from the archwire slot . 1 This resulted in a bracket that enabled the crown to tip in a predetermined direction, whereas with an archwire of full vertical thickness, it would resist tipping in the reverse direction. This was a logical design, since the desired direction of tipping, in routine orthodontic cases, is easy to predict.
