Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. The service process design landscape is changing, with many of the previous limitations disappearing on how and by whom services are delivered. Opportunities for new service design configurations are being supported, to a large extent, by technology-enabled innovations; many tasks previously performed by the service provider may now be performed by either the customer or the service provider. As a result, customers are playing a more active role in the service process, not only through self-service but also by providing information to the service provider to create a more personalized service experience. Designing Service Processes to Unlock Value explores how service processes can be designed to leverage the expanding range of opportunities for service providers and customers to co-create value. Readers will learn about frameworks for value co-creation and models for designing all types of service processes, as well as the unique challenges of designing knowledge-intensive services. And with the growing number of alternatives for designing service processes and determining who performs the various service tasks, service performance outcomes are increasingly dependent on the knowledge, skills, and abilities—that is, capabilities—of both service providers and customers. Thus, the book concludes with approaches to unlock these capabilities—and further boost value co-creation.

Effective use of today's powerful GIS technology requires an understanding of the science of problem-solving that underpins it. Since the first edition published over a decade ago, this book has led the way, with its focus on the scientific principles that support GIS usage. It has also provided thorough, upto- date coverage of GIS procedures, techniques and public policy applications. This unique combination of science, technology and practical problem solving has made this book a best-seller across a broad spectrum of disciplines. This fully updated 4th edition continues to deliver on these strengths.

Vehicle routing problems, among the most studied in combinatorial optimization, arise in many practical contexts (freight distribution and collection, transportation, garbage collection, newspaper delivery, etc.). Operations researchers have made significant developments in the algorithms for their solution, and=Vehicle Routing: Problems, Methods, and Applications, Second Edition=reflects these advances. The text of the new edition is either completely new or significantly revised and provides extensive and complete state-of-the-art coverage of vehicle routing by those who have done most of the innovative research in the area; it emphasizes methodology related to specific classes of vehicle routing problems and, since vehicle routing is used as a benchmark for all new solution techniques, contains a complete overview of current solutions to combinatorial optimization problems. It also includes several chapters on important and emerging applications, such as disaster relief and green vehicle routing.÷

NEW 3rd Edition - September 2020 This is the third edition of the book that has earned 14 5-star reviews. It's now bigger,richer and better. Your walk-through guide to Developer Marketing and Relations now has 9 new chapters since the first edition + 1 more reviewed chapter. Build your DevRel dream team and project. Learn from success and failure stories. Welcome to the third edition of "Developer Marketing and Relations: The Essential Guide". The history starts in October 2017, during the Future Developer Summit. There, Andreas Constantinou and Nicolas Sauvage fully recognized the fragmented nature of developer relations or DevRel - from the types of companies, the products they represented, and the knowledge of the practitioners. It was there we witnessed that the best practices were often locked behind the doors of the companies that mastered them. We knew we wanted develop an essential guide to share this knowledge with a broader audience of developer relations, evangelists & advocates, developer marketing practitioners and beyond. As we have watched the practice of DevRel grow and evolve over the last three years, there is a continued need for education of what DevRel is, along with the strategy and tactics needed for a successful program. The good news is, many of the leading practitioners from the best companies agreed to share their knowledge, stories, learnings, and best practices in this guide! We think you'll find the information insightful, whether you are a seasoned professional in developer relations or you are just getting started. A question we often get asked is: "Can you help us understand how Mozilla, Google, or Microsoft practice developer marketing?" (replace names with your favorite tech brands). That's exactly what this book aims to accomplish. This guide is arranged in an order that takes you from strategic issues to more tactical issues. You can read from start to finish, or jump into the chapter that focuses on what you need to know right now. At a strategic level, you may want to read "Using Developer Personas to Stay Customer-Obsessed" from Cliff Simpkins of Microsoft, or if you are building out a program you might try "Structuring Developer Relations", by Dirk Primbs of Google. If you are just starting out, be sure to read, "Starting from Scratch: How to Build a Developer Marketing Program", by Luke Kilpatrick of Nutanix. If you need to get many stakeholders together in a large organization, the "The Developer Relations Council: Leading and Aligning Developer Marketing within Large Companies" by Arabella David of Salesforce - a new chapter for the third edition- is a must. Then, learn how to understand numbers and KPIs in our new chapter "Measuring the success of a developer communications strategy" by our very own Rich Muir of SlashData. As mentioned, developer programs exist in many types, as different companies are marketing different types of products to developers. Ana Schafer and Christine Jorgensen of Qualcomm describe their experiences with communities around hardware in "Hardware Is the New Software - Building A Developer Community Around A Chip Instead Of An SDK". APIs are well known as a key product in DevRel so we are pleased to bring you a new chapter by Mehdi Medjaoui, founder of APIdays conferences "Developer Relations and APIs". We can't list all of the great chapters here, but we would be remiss if we didn't point out the chapters on community, the heart and soul of any leading developer relations program. Be sure to read "The Power Of Community" by Jacob Lehrbaum of Salesforce, and the new chapter "Building an Inclusive Developer Community" by Leandro Margulis, based on his days at TomTom. Andreas Constantinou, Founder & CEO, SlashData Nicolas Sauvage, President & Managing Director, TDK Ventures Caroline Lewko & Dana Fujikawa, Editors of the third edition, WIP
