The educational training system, called "Using Pesticides Wisely," was created by University of Georgia Cooperative Extension and the Georgia Department of Agriculture. UGA Extension weed scientist Stanley Culpepper , who developed the training, credits Georgia farmers' excellent teamwork and decision-making for the low number of pesticide drift complaints in Georgia in 2017.

Georgia: Pesticide Training Program Has Lowered Drift ...

Chartered in 1785, the University of Georgia is one of the top public research universities in the USA. We are leaders and world-class researchers: our ideas change lives.

The Georgia Pest Management Handbook provides current information on selection, application, and safe use of pest control chemicals. This handbook has recommendations for pest control around homes and on pets; for pests of home garden vegetables, fruits, and ornamentals; and for pests of public health interest associated with our homes. Cultural, biological, physical, and other types of control are recommended where appropriate. Pesticide recommendations are based on information on the manufacturer labels and on performance data from research and extension trials at the University of Georgia and its sister institutions. Because environmental conditions, the severity of pest pressure, and methods of application vary widely, recommendations do not imply that performance of pesticides will always be acceptable. This publication is intended to be used only as a guide. Trade and brand names are used only for information. The University of Georgia does not guarantee nor warrant published standards on any product mentioned; nor does the use of a trade or brand name imply approval of any product to the exclusion of others that may also be suitable. Always follow the use instructions and precautions on the pesticide label. For questions, concerns, or improvement suggestions regarding the Georgia Pest Management Handbook, please contact your county agent.
