Plate tectonics and the distribution of volcanoes | sample answer As the plates fold, cracks and faults occur in the crust, the mantle rises through the cracks in the crust until it reaches the surface through a vent to form volcanic island arcs. Volcanic island arcs are curved chains of volcanic islands which mark the subduction zone of 2 plates.

~~Plate tectonics and the distribution of volcanoes sample ...~~

As summarized in Chapter 3, magma is formed at three main plate-tectonic settings: divergent

boundaries (decompression melting), convergent boundaries (flux melting), and mantle plumes (decompression melting).

Figure 4.3 The plate-tectonic settings of common types of volcanism.

Composite volcanoes form at subduction zones, either on ocean-ocean convergent boundaries (left) or ocean-continent convergent boundaries (right).
