representations of knowledge production are now being replaced with a community of policy makers, academic leaders, corporate strategists and growth management alliances, with the potential to liberate cities from the stagnation which they have previously been locked into by offering communities: the freedom to develop polices, with the leadership and strategies capable of reaching beyond the idea of "creative slack"; a process of reinvention, whereby cities become "smarter," in using intellectual capital to not only meet the efficiency requirements of wealth creation, but to become centres of creative slack; the political leadership capable of not only being economically

innovative, or culturally creative, but enterprising in opening-up, reflexively absorbing and discursively shaping the democratic governance of such developments; the democratic governance to sustain such developments. Drawing together the critical insights from papers from a collection of leading international experts on the transition to smart cities, this book proposes to do what has recently been asked of those responsible for creating Smarter Cities. That is: provide the definitional components, critical insights and institutional means by which to get beyond the all too often self-congratulatory tone cities across the world strike when claiming to be smart and by

This study investigates the evolution of abdominal surgery in treatment of Crohn's disease (CD) in the era of immunomodulatory drugs and biologicals. It concerns risk of abdominal surgery overall and sub-categories of abdominal surgery, risk of repeat surgery and factors that affect this risk, and risk of getting a stoma. Surgical recurrence is a major clinical problem as repeat procedures are more complex and expose the patients to a higher medical risk both in conjunction with surgery and afterwards. Updated information on abdominal surgery for CD will be of use when making decisions about medical vs surgical interventions. In a nationwide

Acces PDF Vw Online Repair S

cohort of 21 273 patients with CD during the years 1990-2014, the cumulative incidence of abdominal surgery within five years of diagnosis decreased continuously down to 17.3% for patients diagnosed with CD during the last calendar period of study, 2009-2014. Ileocecal resection was the most common primary procedure. The incidence of colectomy was low in all calendar periods and continuously decreased. The incidence of proctectomy was very low even after decades with the disease, 3.0% for patients diagnosed 1990-1995 with a median follow-up of 21 years. Incidence of repeat abdominal surgery within five years of primary procedure decreased in

the 90s down 16.0% in the 1996–2000 period with a risk of ileocolic reresection of 4.4%. After 2000, despite introduction of biologicals in 1998, no further significant decrease in repeat surgery was observed. In a retrospective review of prospectively maintained databases at three university hospitals, the rate of surgical recurrence for 389 patients with CD who had been treated with a primary ileocecal resection between 2000–2012 was investigated. The patients were operated receiving either a temporary stoma (20%) or a primary anastomosis (80%) with a median follow-up time of 105 months. Patients selected to temporary stoma had a higher prevalence of baseline risk factors

Acces PDF Vw Online Repair S

usually associated with an increased risk of recurrence such as penetrating disease behaviour. Despite this, there was no difference in long-term surgical recurrence between the one- and two-stage groups; 18% vs 16%. In a retrospective review of prospectively maintained databases at two university hospitals, the effect of smoking cessation on rate of surgical recurrence was assessed. 242 patients were included with a median follow-up of 112 months. Surgical recurrence rate for smokers vs quitters was 16/42 (38%) vs 3/31 (10%); $p = 0.02$; risk ratio = 3.9 despite a median time for smoking exposure after the primary procedure of three years. Among the non-smokers

28/169 (17%) had a surgical recurrence at last follow-up. 8 out of 11 smoking patients who needed a second resection went on to need a third resection. Of the patients who were free of surgical recurrence at follow-up, those who had quit smoking were significantly less likely to have been put on medical therapy compared with smokers with a risk ratio of 3.2. In an observational study of a nationwide cohort of 19 146 patients with incident CD 2002-2013 and followed through 2017, the incidence and prevalence of stoma was investigated. The cumulative incidence of stoma formation within five years was 2.4% and remained constant from 2002 and onwards although

Acces PDF Vw Online Repair S

cumulative ever-use of biologicals increased and time to start with treatment with biologicals decreased. 48% of all stomas were reversed. Ileostomies encompassed about two-thirds of all stomas and risk of stoma was higher among patients with elderly-onset CD and among patients with perianal manifestations of the disease. 28% of the patients who underwent surgery with formation of a stoma had perianal disease. 0.6% of all incident patients had a permanent stoma five years after diagnosis.

Beauty masks, diapers, wound dressings, wipes, protective clothes and biomedical products: all these high-value and/or large-

volume products must be highly compatible with human skin and they should have specific functional properties, such as anti-microbial, anti-inflammatory and anti-oxidant properties. They are currently partially or totally produced using fossil-based sources, with evident issues linked to their end of life, as their waste generates an increasing environmental concern. On the contrary, biopolymers and active biomolecules from biobased sources could be used to produce new materials that are highly compatible with the skin and also biodegradable. The final products can be obtained by exploiting safe and smart nanotechnologies such as the extrusion of bionanocomposites and

electrospinning/electrospray, as well as innovative surface modification and control methodologies. For all these reasons, recently, many researchers, such as those involved in the European POLYBIOSKIN project activities, have been working in the field of biomaterials with anti-microbial, anti-inflammatory and anti-oxidant properties, as well as biobased materials which are renewable and biodegradable. The present book gathered research and review papers dedicated to materials and technologies for high-performance products where the attention paid to health and environmental impact is efficiently integrated, considering
