Describes the various kinds of trolls found in Norway's mountains and relates some of the stories associated with them.

The first plain-paper office copier -- which was introduced in 1960 and has been called the most successful product ever marketed in America -- is unusual among major high-technology inventions in that its central process was conceived by a single person. David Owen's fascinating narrative tells the story of the machine nobody thought we needed but now we can't live without. Chester Carlson grew up in unspeakable poverty, worked his way through junior college and the California Institute of Technology, and made his discovery in solitude in the depths of the Great Depression. He offered his big idea to two dozen major corporations -- among them IBM, RCA, and General Electric -- all of which turned him down. So persistent was this failure of capitalist vision

that by the time the Xerox 914 was manufactured by an obscure photographic-supply company in Rochester, New York, Carlson's original patent had expired. Xerography was so unusual and nonintuitive that it conceivably could have been overlooked entirely. Scientists who visited the drafty warehouses where the first machines were built sometimes doubted that Carlson's invention was even theoretically feasible. Drawing on interviews, Xerox company archives, and the private papers of the Carlson family, David Owen has woven together a fascinating and instructive story about persistence, courage, and technological innovation -- a story that has never before been fully told.

This vibrant journal provides plenty of space to jot out notes on the stars and astronomy. Or, simply write your favorite quotations, poems, and reflections. You'll love the beautifully fresh cover design and feel inspired to write often and consistently. * Excellent thick binding * Over 90 pages of thick, lined paper * Simplistic design perfectly made for any occasion or reason * Journal measures 6 inches wide by 9 inches high

These digital bookmarks are a portable and fun way to monitor and record daily reading. It has a programmable countdown timer with an alarm and a cumulative timer for multi-session reading.

In the past ten years there has been a rapid growth of the research and application area known as Lab-on-a-Chip. After an initial focus on electrokinetic separation techniques on chip, the scope of the field has widened to include topics like microfluidics, DNA analysis, cell analysis, microreactors and mass spectrometer interfacing. As well as the analytical chemistry community, synthetic chemists, chemical engineers, biochemists and biomedical engineers are now also becoming more and more interested in using new micro- and nanotechnological techniques. This first Lab-on-a-Chip book contains a broad collection of papers on microtechnology, microfluidics, analytical methods and applications. All contributions are written by leading researchers in their respective fields, and provide new scientists with an overview of the field, to make him/her aware of the enormous opportunities offered by modern technology. The work presented in this book will definitely stimulate readers to new ideas and concepts, and lead to further innovations in this area. - Provides a quick introduction into the different aspects of this field - Describes technology that has already revolutionized the world of chemical and biochemical analysis and synthesis - All contributions are written by leading researchers in their respective fields

FINALIST: Business Book Awards 2019 - Start-Up Inspiration Category There are new flexible and independent working opportunities available in the gig economy for those brave enough to seize them. It is estimated that the number people involved with the gig economy will double in the next four years. New generation workers are realising that they can break the chains of corporate work and go at it alone. With flexible working hours, fluid work arrangements and technology that they can leverage to their advantage, people are creating purposeful careers that fit in with their lives, not the other way around. Working in the Gig Economy is the ultimate guide to successfully navigating the new flexible world of work. This is a book that will allow you to

really examine the possibilities of freelance and flexible working. Is it really for you? Do you have what it takes to stay motivated, get clients to hire you and achieve that long-yearned for work-life balance? Thomas Oppong is an expert in entrepreneurship and the gig economy. With this book, he takes readers through the main pitfalls of working for themselves, including how to stay productive, how to manage your professional network, build a personal brand and crucially how to keep the work coming and get paid on time. *Working in the Gig Economy* is the essential guide to having a successful and fulfilling career in the gig economy.

CO2 Laser Cutting explains and describes how engineering materials are cut using a CO2 laser. Information is given on the cutting of metals and non metals on a wide range of levels from practical advice and processing parameters to explanations of the physical and chemical reactions which take place in the cut zone. In an effort to make the book as readable and informative as possible the subject is treated in a descriptive rather than a mathematical way. The benefit of *CO2 Laser Cutting* is twofold as it gives practical advice to the operator and technical advice to the researchers or scientist.
