Forest trees cover 30% of the earth's land surface, providing renewable fuel, wood, timber, shelter, fruits, leaves, bark, roots, and are source of medicinal products in addition to benefits such as carbon sequestration, water shed protection, and habitat for 1/3 of terrestrial species. However, the genetic analysis and breeding of trees has lagged behind that of crop plants. Therefore, systematic conservation, sustainable improvement and pragmatic utilization of trees are global priorities. This book provides comprehensive and up to date information about tree characterization, biological understanding, and improvement through biotechnological and molecular tools.

Bolivia showed a solid macroeconomic performance in recent years, owing to its strong trade and prudent economic policies. IMF staff stressed the need to tighten monetary conditions through increasing the policy interest rate as a means to combat inflation. The Executive Board praised authorities for their sound macroeconomic management, and concurred that structural reform and increased investment will enhance economic growth. However, the crisis management framework could be strengthened with a deposit insurance scheme to protect small depositors in the event of bank liquidation.

The 7th Edition of Gary Christian's Analytical Chemistry focuses on more in-depth coverage and information about Quantitative Analysis (aka Analytical Chemistry) and related fields. The content builds upon previous editions with more enhanced content that deals with principles and techniques of quantitative analysis with more examples of analytical techniques drawn from areas such as clinical chemistry, life sciences, air and water pollution, and industrial analyses.
